\$141B

2025 Global Market

Peptide therapeutics now rival traditional small-molecule drug classes in commercial scale, driven by GLP-1 blockbusters and a 280+ drug pipeline.

\$295B

Projected by 2033

A ~9% CAGR over the next decade reflects record M&A activity, accelerating FDA approvals, and expansion into oncology, metabolic, and CNS indications.

Company Overview

Vector Science & Therapeutics is a commercial-stage life sciences company developing and commercializing peptide therapeutics and proprietary localized drug-delivery technologies. The Company has built a vertically integrated peptide platform spanning cGMP manufacturing, quality testing and physician-directed distribution, supported by an exclusive commercial relationship with LyoGenesis Plus for peptide production. Vector's broader portfolio leverages its intellectual property in localized and transdermal drug delivery across sports medicine, perioperative pain, regenerative medicine and oncology. The Company's near-term commercial strategy is led by peptide production, with additional platforms including VectorMist™ for site-directed perioperative pain management and Valor for transdermal peptide delivery.

Investment Highlights

Vertically Integrated Platform Positioned to Capture the Peptide Opportunity

- Combines peptide IP, cGMP production, quality verification and direct-to-physician distribution in a single platform.
- Exclusive LyoGenesis relationship provides capacity for up to 800,000 peptide vials per month beginning in mid September.
- Verlytix provides purity, potency and contaminant testing, supporting pharmaceutical-grade quality control.

High-Margin Peptide Production Drives Near-Term Earnings Potential

- Management estimates production cost of approximately \$15 per vial versus wholesale pricing starting near \$100.
- Initial commercial launch (August 24th) targets 8 peptides, including 6 recently recommended for the FDA's 503A Bulks List, from a portfolio of 20+ formulated peptides with 55,000 vials of peptides already pre-sold
- Management expects a rapid production ramp as physician and distributor relationships convert into volume.

Physician-First Model Differentiates Vector from Gray-Market/Telehealth Channels

- Vector sells pharmaceutical-grade peptides directly into physician channels rather than relying on research-grade or consumer telehealth distribution.
- Initial focus on sports medicine and orthopedics leverages management's established industry relationships.
- Commission-based distributors provide a scalable commercial channel without a large fixed sales infrastructure.

Proprietary Drug-Delivery IP Creates Multiple High-Value Shots on Goal

- Valor combines peptides with proprietary transdermal delivery technology targeting recovery and regenerative applications.
- VectorMist is designed to deliver localized perioperative therapeutics while reducing reliance on systemic opioids.
- Earlier-stage oncology technology targets localized delivery of therapeutics in pancreatic cancer.

Attractive Unit Economics with Significant Operating Leverage

- Management projects approximately \$222 million of revenue over the next 12 months based on a ramp to 200,000 peptide vials sold per month.
- Management estimates current corporate burn at approximately \$80,000 per month, with much of the team compensated through equity.
- Additional production capacity could materially expand revenue and earnings beyond the current manufacturing footprint.

Deep Management Alignment & Tight Capital Structure

- Management brings senior experience across major pharmaceutical and medical-device companies, with former Wisconsin Governor and U.S. HHS Secretary Tommy Thompson serving as Chairman.
- Management controls a substantial portion of the 153M basic shares outstanding, with approximately 60M management shares locked for three years.
- Insiders have also purchased shares in the open market, reinforcing alignment with public shareholders.

Potential Nasdaq Uplisting Could Expand the Investor Base

Market Opportunity

Market / Status	TAM	Non-Systemic Component	Vector Capture (5-Yr SOM)
Perioperative Pain COMMERCIAL LAUNCH	\$45B	\$7B · ~15%	\$420M U.S. laparoscopic ASC · LASSO Protocol · 5-yr
Musculoskeletal PIPELINE	\$58B	\$9B · ~15%	\$550M U.S. orthopedic + sports medicine ASC · 5-yr
Regenerative Medicine PIPELINE	\$38B	\$8B · ~21%	\$580M Surgical site regenerative · biomechanical + VectorMist
Drug / Peptide Therapeutics DISCOVERY	\$50B	\$6B · ~12%	\$300M U.S. transdermal peptide + surgical site · long-term

Value Proposition

Vector offers rare microcap exposure to the peptide boom through a business built to monetize demand now, not years from now. The Company combines proprietary IP with cGMP production, quality verification and physician-directed distribution, creating a vertically integrated platform with compelling unit economics and substantial operating leverage. Management estimates approximately \$15 production cost per vial against wholesale pricing starting near \$100, with capacity scaling toward 800,000 vials per month.

Peptide production provides the earnings engine; Vector's drug-delivery IP provides the upside. Valor extends the platform into proprietary transdermal peptide delivery, while VectorMist targets localized, opioid-sparing perioperative care and earlier-stage technology adds oncology optionality. This combination of near-term cash generation and high-value proprietary platforms distinguishes Vector from both telehealth distributors and conventional peptide manufacturers.

The investment case is ultimately one of leverage: a low-cost operating structure, high-margin products, scalable manufacturing and multiple proprietary technologies addressing large markets. If management executes, Vector can evolve rapidly from an overlooked microcap into a profitable, vertically integrated peptide and drug-delivery company—with the earnings power to force a fundamental revaluation.

Business Model

Vector monetizes its integrated peptide and drug-delivery platform through multiple revenue streams that share a common manufacturing and physician-distribution infrastructure. The model begins with high-margin peptide sales and expands into proprietary devices and recurring consumables as the portfolio commercializes.

Peptide Sales — Near-Term Revenue Engine

- Wholesale and direct-to-physician sales of cGMP, pharmaceutical-grade peptides.
- Management estimates approx. \$15 production cost per vial versus wholesale pricing starting near \$100.
- Dedicated LyoGenesis capacity supports scale toward 800,000 vials per month.

Proprietary Devices — Higher-Value Product Revenue

- VectorMist targets procedure-based sales into laparoscopic surgical settings.
- Valor adds a proprietary transdermal delivery device to the existing peptide platform.

Recurring Consumables Revenue

- Valor pairs its delivery device with recurring peptide consumables, creating revenue beyond the initial device sale.
- Growing prescriber adoption expands the installed base for repeat product sales.

Platform Expansion — Operating Leverage

- Shared manufacturing, quality-control and physician-distribution infrastructure supports additional peptides and drug-delivery applications.
- New products can leverage the existing commercial platform rather than require a standalone go-to-market infrastructure.
