Company Overview

Calidi Biotherapeutics is a clinical-stage biotechnology company advancing the next generation of precision genetic medicine through its innovative systemic delivery platform, RedTail. Leveraging over a decade of scientific expertise, Calidi has developed an engineered enveloped vaccinia virus uniquely designed to evade immune clearance, selectively target metastatic tumor sites, and deliver potent genetic payloads directly within the tumor microenvironment. The RedTail platform demonstrates significant potential by enabling systemic administration – overcoming key limitations of traditional intratumoral methods – while expanding treatment options across various aggressive cancers including non-small cell lung cancer (NSCLC), triple-negative breast cancer (TNBC), ovarian cancer, melanoma, soft tissue sarcoma, and glioblastoma.

Investment Highlights

Transforming cancer treatment with breakthrough systemic delivery platform

- Proprietary enveloped vaccinia virus engineered to evade immune clearance and selectively target metastatic tumor sites
- Enables systemic administration, dramatically expanding patient eligibility compared to traditional intratumoral therapies
- Capable of delivering multiple genetic payloads directly into the tumor microenvironment, significantly enhancing therapeutic efficacy
- Potential platform utility outside of oncology in indications like autoimmune disease

Robust and differentiated pipeline

- Lead candidate CLD-401 advancing through IND-enabling studies, integrating an IL15 superagonist payload specifically designed to generate potent and durable anti-tumor immune responses
- Preclinical studies showcase exceptional efficacy, demonstrating tumor eradication across diverse metastatic cancer models including lung, ovarian, head & neck, and melanoma
- Strategic development pipeline poised to address high-unmet medical needs, particularly targeting aggressive cancers such as NSCLC, TNBC, ovarian cancer, melanoma, soft tissue sarcoma, and glioblastoma, enhancing both clinical relevance and market impact

Strong intellectual property targeting significant market opportunity

- IP estate covering novel systemic delivery mechanisms, engineered viral platforms, and payload technologies
- Addressable oncology market estimated at \$13 billion to \$15 billion annually in the US alone, with substantial growth potential driven by increasing clinical adoption of oncolytic therapies

Seasoned and experienced leadership team

- Newly appointed leadership (Chairman, CEO, and CMO) of accomplished biotech executives with proven track records in building and advancing biotechnology companies.
- Strong focus on efficiency and cost-cutting

Expanding strategic collaborations and partnerships

- Actively pursuing partnership opportunities with leading biopharmaceutical companies to accelerate development and commercialization of RedTail-based therapies.

Buy rating from Ladenburg Thalmann with \$120 per share price target

Upcoming Milestones

Value Proposition

Calidi Biotherapeutics offers investors a compelling entry point into a rapidly expanding sector of oncology through its innovative genetic medicine delivery platform. RedTail represents the culmination of more than a decade of focused research and development. RedTail's engineered enveloped vaccinia virus uniquely enables systemic delivery, overcoming critical limitations of traditional intratumoral therapies by selectively targeting metastatic tumors and effectively delivering therapeutic genetic payloads directly within the tumor microenvironment.

The company's lead candidate, CLD-401, currently in IND-enabling studies, incorporates a potent IL15 superagonist genetic medicine payload, demonstrating impressive preclinical efficacy with significant tumor regression and immune response activation across multiple aggressive cancer models, including lung, ovarian, melanoma, and triple-negative breast cancers. This targeted approach positions Calidi strategically to address substantial unmet medical needs in oncology, targeting an estimated \$13 billion to \$15 billion annual market opportunity in the U.S.

Calidi's robust intellectual property portfolio reinforces its competitive advantage and accelerates its path toward clinical and commercial milestones. Under the direction of experienced biotech executive and newly appointed CEO Eric Poma, PhD, supported by a leadership team with proven track records in biotech development, Calidi is well-positioned for substantial growth. Analyst coverage currently highlights the company's promising upside potential, with a price target of \$120 per share, underscoring investor confidence in Calidi's differentiated approach and long-term value creation potential.

Stepwise creation of the platform: increasing potency and selectivity, evading immunity, delivering genetic medicine payload(s)

Step 1	Step 2	Step 3	Step 4	Step 5	Step 6
					
Vaccinia virus engineered for selective tumor targeting and potent lysis	Potential for virally-encoded payload , delivered in situ (i.e., IL-15 superagonist)	Enveloped virus used for immune protection and tumor targeting: allows for systemic administration	Genetic engineering to express CD55 on envelope and enhance immune protection	CLD401: Systemic administration, potent and specific tumor lysis, and IL15 superagonist expression in situ	New candidates contain multiple payloads and additional membrane-expressed proteins
