¹ does not include \$212M gross proceeds from November 2025 PIPE

enlivex.com

First and only stock that provides investors with exposure to prediction markets through a treasury strategy focused on the most exciting prediction markets protocol, RAIN.

Enlivex also has an operating business focused on late-stage clinical development of Allocetra™, a novel therapy designed to treat the joint disease osteoarthritis.

Company Overview

Enlivex operates a dual-engine corporate structure that combines clinical development in quality longevity therapeutics with a digital asset treasury strategy centered on the Rain prediction markets protocol. The first engine of this model is Allocetra™, Enlivex's macrophage reprogramming immunotherapy platform. Allocetra™ is designed to restore immune balance by reprogramming dysregulated macrophages back to their homeostatic state. The therapy is being developed to address inflammatory and degenerative conditions associated with aging, including knee osteoarthritis and additional high-need indications. Positive clinical data in knee osteoarthritis have demonstrated meaningful reductions in pain and improvements in function across treated patients. The second engine of the Enlivex model is its RAIN-based digital asset treasury strategy. Through a \$212 million private placement, Enlivex established the first public company treasury strategy centered on a decentralized prediction markets protocol. RAIN functions as a forecasting infrastructure where decentralized markets resolve real-world outcomes through token-based economic mechanisms, including a buyback-and-burn structure. Allocetra™ provides the biological value floor through clinical development in longevity therapeutics, while the RAIN treasury operates as the financial growth engine, giving Enlivex exposure to the expanding decentralized forecasting ecosystem through a Nasdaq-listed structure.

Investment Highlights

Transformational Digital Asset Treasury Strategy

- First public company to adopt corporate treasury strategy on the RAIN token, a decentralized, permissionless predictions and options protocol with AI-resolved markets and a deflationary buyback-and-burn mechanism
- \$212M PIPE provided capital to deploy the treasury strategy and accumulate RAIN as a primary reserve asset
- Exclusive option to acquire up to \$918M of RAIN at \$0.0033; one-year, fixed price option creates substantial asymmetric upside as RAIN adoption accelerates
- Active, yield-generating treasury strategy designed to grow RAIN holdings through staking, governance participation, and treasury management

Dual Engine Corporate Model

- Dual-engine strategy structure combining longevity therapeutics development with a digital asset treasury
- Allocetra™ provides the scientific and clinical value floor
- RAIN treasury provides a financial growth engine linked to decentralized prediction markets infrastructure
- Two distinct drivers of value creation operating in non-correlated domains: biotechnology innovation and forecasting infrastructure

Advancing Allocetra™ Macrophage Reprogramming Therapy

- Universal off-the-shelf cell therapy designed to restore macrophage homeostasis
- Positive Phase I/II knee osteoarthritis (OA) data demonstrating meaningful pain reduction and improved functional outcomes
- Initiated a Phase IIb trial in age-related Primary knee OA patients with FDA clearance in the US
- Pipeline expansion into additional OA indications including basal thumb OA and TMJ OA

Experienced Leadership with Proven Execution

- Leadership team with experience across biotechnology, public markets, regulatory environments, and digital assets
- Management previously led the successful \$590M exit of PROLOR Biotech and strategic partnerships with global pharmaceutical companies
- Board composition spanning global policy, biotechnology development, and digital infrastructure

Strengthened Capital Position

- Strong capital position supported by the \$212M PIPE financing
- Treasury strategy provides additional capital flexibility and long-term asset accumulation potential
- Capital structure designed to support continued clinical development while expanding treasury assets

The Explosive Growth of Prediction Markets

Metric	 Polymarket	 Kalshi	 Limitless Labs
Platform Type	Permissioned, crypto-native prediction market on Polygon.	US-regulated, centralized platform for event contracts.	An emerging challenger with a lot of potential to break into that top tier
Cumulative Trading Volume	\$22.692 billion	\$15.905 billion	\$486.01 million
DEX Volume (over 30 days)	\$3.472 billion	\$4.427 billion	\$89.93 million
Active Users	~300,000 (monthly average 2025)	~400,000 By Jul 2024	~37,000 By Oct 2025

Value Proposition

Enlivex offers a differentiated, dual-engine value creation model that converges clinical-stage quality longevity science with the emerging prediction-markets economy—creating what the Company believes is the world's first healthspan-wealthspan public company. Through this structure, Enlivex combines the advancement of Allocetra™, its novel macrophage reprogramming immunotherapy, with a strategic digital asset treasury centered on the RAIN protocol.

The Company's RAIN-based treasury strategy provides investors with compliant public-market exposure to the rapidly expanding decentralized prediction-markets ecosystem. Supported by a \$212M PIPE and a unique option to acquire up to \$918M of RAIN at a fixed, deeply discounted price, this active treasury model is designed to accumulate and expand long-term RAIN holdings through staking, governance participation, and strategic treasury management.

At the same time, Enlivex continues advancing Allocetra™, a universal, off-the-shelf cell therapy designed to restore macrophage homeostasis and address major inflammatory and degenerative diseases associated with aging. Positive clinical data in knee osteoarthritis—including meaningful pain reduction and functional improvement across patient subgroups—along with development programs TMJ OA , highlights a broad multi-billion-dollar market opportunity.

With an accomplished leadership team, strengthened balance sheet, and two non-correlated engines of growth—longevity science innovation and a prediction-markets treasury—Enlivex represents a unique opportunity for investors seeking asymmetric upside at the intersection of next-generation immunotherapy and decentralized financial infrastructure.

The Missing Link of Prediction Markets
