## Company Overview

Foremost Clean Energy is a North American uranium exploration company strategically positioned to benefit from the accelerating global nuclear renaissance driven by rising power needs from AI, data centers, and electrification. The Company holds the right to earn up to a 70% interest in a large, diversified portfolio of 10 underexplored uranium properties covering more than 330,000 acres in Canada's Athabasca Basin, one of the world's premier uranium jurisdictions, known for hosting the highest-grade deposits globally. Foremost's assets are concentrated along proven uranium corridors and in close proximity to major discoveries and producing mines, significantly reducing exploration risk. Backed by a strategic partnership with Denison Mines Corp., Foremost leverages extensive historical data, technical expertise, and operational support to advance multiple drill-ready targets with near-term discovery potential. Complementing its uranium focus, the Company also maintains a portfolio of lithium and gold projects in Manitoba and Quebec, providing additional upside exposure to critical minerals essential to the clean energy transition.

## Investment Highlights

### Large-scale uranium portfolio in a world-class jurisdiction

- Option to earn 70% interest in 10 uranium properties spanning 330,000+ acres in Canada's Athabasca Basin, one of the most prolific uranium regions globally.
- Assets are strategically located along proven uranium corridors and adjacent to major discoveries, including IsoEnergy's Hurricane deposit and multiple producing mines.
- Athabasca Basin deposits are known to average 10x–100x higher grades than the global uranium average, offering superior discovery economics.

### Strategic partnership with Denison Mines de-risks exploration

- Backed by Denison Mines Corp. (NYSE Ameridan: DNN), Foremost's largest shareholder (~17%), a leading uranium developer with deep technical, operational, and financial resources.
- Denison provides inherited historical drilling, geophysical data, and geological expertise, accelerating target generation and improving discovery odds.
- Board-level involvement by Denison leadership aligns incentives and strengthens execution discipline across exploration programs.

### Discovery-ready targets with multiple near-term catalysts

- Portfolio includes permitted, drill-ready targets with confirmed uranium mineralization, hydrothermal alteration, and strong geophysical signatures.
- Ongoing and planned multi-property drill programs create a steady pipeline of news flow and discovery catalysts.
- Simultaneous exploration across multiple projects materially increases the probability of a high-impact discovery.

### Compelling macro tailwinds from the global nuclear renaissance

- Uranium demand is accelerating; 30+ countries commit to tripling nuclear capacity by 2050.
- Rising power needs from AI, data centers, and electrification underscore uranium's role as a clean, reliable baseload energy source.

### Tight capital structure with high leverage to discovery

- One of the only NASDAQ-listed uranium explorers, offering rare institutional accessibility within the sector.
- Tight float amplifies potential valuation impact from exploration success.

### Additional upside from lithium and gold exposure

- Portfolio of lithium and gold projects across Manitoba and Quebec covering 55,000+ acres provides optionality beyond uranium.
- Lithium assets benefit from North American critical mineral policies and established infrastructure, offering long-term development potential.

## Value Creation: Systematic Steps to Increasing Shareholder Value

**\$9M 2026 Exploration Budget**  
 To be deployed across a highly prospective project portfolio with strong historical exploration and clearly defined, high-priority, drill-ready targets

**Extensive Historic Exploration**  
 Includes drilling and geophysical surveys by Denison Mines – provides Foremost with a **validated roadmap** and clear competitive advantage, enabling targeted drilling of high-potential, **mineralized trends** from the outset

**Strategically Positioned Projects**  
 Alongside or within major uranium trends including the **La Rocque Corridor** – host to IsoEnergy's world-class Hurricane Deposit (46.8M lbs at 34.5% U<sub>3</sub>O<sub>8</sub>) highlighting the potential for high grade discoveries

**Discovery Ready Targets**  
 Multiple drill programs in the 2026 pipeline designed to build on 2025 outcomes, testing extensions of mineralized zones and look for new discoveries

## Value Proposition

Foremost Clean Energy offers investors leveraged exposure to one of the most compelling commodity cycles of the next decade: uranium. As global energy policy pivots decisively toward nuclear power to meet decarbonization goals, AI-driven electricity demand, and energy security mandates, uranium demand is accelerating into a structurally constrained supply environment. Foremost is uniquely positioned within this backdrop, controlling a large, diversified portfolio of discovery-ready uranium assets in the Athabasca Basin—the world's premier high-grade uranium jurisdiction—where even a single meaningful discovery can drive substantial value creation.

The Company's strategic partnership with Denison Mines materially de-risks exploration by providing access to decades of historic data, technical expertise, and operational insight, while aligning Foremost alongside a proven uranium developer advancing Canada's first ISR mine. With multiple drill programs underway or planned across high-priority targets, Foremost is entering a catalyst-rich phase where consistent exploration results can unlock rapid market re-rating. Combined with a tight share structure, NASDAQ listing, and additional upside from lithium and gold assets, Foremost represents a high-conviction opportunity for investors seeking asymmetric upside to a discovery-driven uranium growth story amid the global nuclear renaissance.

## Highly Attractive Uranium Portfolio

Large exploration portfolio in the Athabasca Basin; 45 claims within 10 projects, spanning 332,378 acres / 134,509 hectares within known uranium mineralization surrounded by deposits, mines and mills.
