Buy

U.S. Government Critical Mineral Stockpiling Effectively a Price Floor for Future Production – Reiterate Buy, \$15 PT

Summary

- We believe a \$12B U.S. critical mineral stockpile, up from \$2B, effectively establishes price floors for NioCorp's future production of at least six critical minerals.
- We expect meetings today at a U.S. Department of State event with more than 50 countries suggests future international collaboration announcements to grow interlinked government stockpiles, in our view.
- In addition to coordinating with the U.S. Export-Import Bank, NioCorp has had conversations with government funding agencies in Germany and the United Kingdom, based on previous company disclosures.
- NioCorp is pre-revenue, and we forecast initial revenue in the first half of CY30.
- We anticipate NioCorp next raises capital in the second half of CY26.
- We reiterate our Buy rating and 12-month price target of \$15 by employing a discounted cash flow analysis with a discount rate of 14.0%.

Details

U.S. critical mineral stockpile's increase to \$12B, from \$2B supports prices for NB's future production. We believe this week's U.S. White House and U.S. Export-Import Bank (EXIM) announcement of a \$12B critical mineral stockpile, up from a \$2B indication in last July's One Big Beautiful Bill Act, effectively establishes a price floor for all of NB's planned critical mineral production from its mining project in Nebraska. We expect NB will start producing at least six critical minerals from the company's Elk Creek project in Nebraska in CY30, including (in alphabetical order) dysprosium, neodymium, niobium, praseodymium, scandium, terbium, and titanium.

As a result of a higher publicly stated amount of a U.S. critical mineral stockpile effort, we believe a 2026 catalyst is NB announcing letters of commitment for a private debt facility to supplement future EXIM funding and equity. NB's most recent presentation from January 2026 indicated required upfront funding for its critical mineral project in Nebraska of \$1.2B, including \$800M of debt and ~\$400M of equity, of which NB raised ~\$360M+ (gross) of equity, excluding a \$10M grant, in 2025. A larger U.S. critical mineral stockpile supports pricing assumptions in NB's upcoming release of an updated feasibility study and will help both government and private lenders complete internal diligence and committed review steps to extend funding, in our view.

Today's U.S. Department of State event will lead to international announcements, in our view. As a follow-up to the U.S. critical mineral stockpile announcement from Monday, U.S. Secretary of State Marco Rubio today is hosting an inaugural "Critical Mineral Ministerial" event with over 50 countries (official press release issued on 2/2/26). We expect today's meetings will lead to international announcements about strengthening critical mineral supply chains outside of China and Russia. We believe NB will benefit from this event by working with more government funding agencies outside of the U.S. NioCorp has previously publicly announced \$10M in awarded grant funds from the U.S. Department of War and an EXIM loan application of \$780M. NioCorp has had conversations with government funding agencies in Germany and the United Kingdom, based on previous company disclosures.

U.S. and allies critical mineral stockpile urgency due to China hoarding risk. We believe China will continue to increase inventories of commodities, which some mining officials have referred to as hoarding. For instance, the White House critical mineral stockpile press conference 2/2/26 included comments by Robert Friedland, founder and Executive Co-Chairman of Ivanhoe Mines (IVN.TO - NR). Mr. Friedland delivered comments at the press conference about opportunities to bring metals from other countries into the U.S. for refining. More recently, Mr. Friedland

publicly referred to a Bloomberg article on 2/3/26 about China increasing copper inventories. Separately, Mr. Friedland in the last month publicly mentioned niobium and scandium as increasingly important for the defense industry supply chain. He also referred to critical minerals as the new oil and that China is hoarding metals in addition to gold as alternative forms of currency to the dollar. One risk he has noted in the mining industry is up to 3-year lead times for large equipment orders, which we believe includes large electric motors and other equipment from companies such as ABB (ABBN.S - NR) and Siemens (SIEGn.DE - NR), among others.

Shipping industry shows China imports of various commodities is increasing. China has indicated more demand for bauxite and iron ore imports, as demonstrated by higher forward shipping rates for the largest type of dry bulk ship (Capesize ships). We also note that rates for ships that move liquefied petroleum gas, oil, and refined products have increased YTD [refer to our coverage of StealthGas (GASS - Buy) and Seanergy (SHIP - Buy), among other shipping companies].

Preview of NB's updated feasibility study, with guidance of release by end of March 2026. NB has commented on finalizing an updated feasibility study on its project in Nebraska called Elk Creek (NB published the last feasibility study in 2022) by the end of March, but we note that some companies release feasibility studies a couple of months after finalizing the data. EXIM has been reviewing the data for the updated feasibility study as NB completed analysis of drill results, based on previous NB comments. We expect this updated feasibility study to provide more details on the metric tonnes of salable products from the critical minerals at Elk Creek. We expect more details on the recovery grades and pricing assumptions for six concentrates or oxides produced from critical minerals: ferroniobium (FeNb), scandium trioxide (Sc₂O₃), titanium tetrachloride (TiCl₄, or "Tickle"), dysprosium oxide, terbium oxide and neodymium-praseodymium (NdPr). We currently forecast scandium trioxide accounts for 33% of the in-ground value of NB's resources of ~\$35B, followed by NdPr at 25%, then FeNb at 16%. We note the value of NB and other mining company shares will be a significant discount to in-ground resource value estimates based on actual recoveries in metallurgical processes and mining costs.

Scandium already publicly part of critical mineral reserve stockpile effort. In September 2025, the U.S. Defense Logistics Agency (DLA) announced an intent to procure from Rio Tinto up to \$40M of scandium oxide over a 5-year period for addition to the national defense stockpile. Government documents suggest a price per kilogram of greater than \$6,000 compared to NB's 2022 feasibility study assumed price of ~\$3,700 per kilogram. On 10/23/25, NioCorp entered an agreement with Lockheed Martin (LMT - NR), supported by a \$10M grant from the U.S. Department of War to establish a U.S. scandium supply chain. NB has announced working with Lockheed Martin (LMT - NR) to develop scandium-based technology. Also, NB announced an acquisition in December 2025 ([LINK](#) to our 12/9/25 NB update note) to vertically integrate the U.S. scandium supply chain.

F2Q26 (Dec) preview after pre-release of net loss. On 1/12/26, NB announced a preliminary F2Q26 (Dec) net loss amount of (\$0.8M), narrower than our (\$10.3M) forecast due in part to a \$5.9M non-cash gain related to the change in fair value of earnout shares and warrant liabilities. We maintain our operating expense forecast of \$10.6M in F2Q26, up 265% y/y, as we factor in other income of \$3.5M from previously awarded U.S. Department of War (DoW) grant funding of up to \$10M. We note that Nano One (NNOMF - Buy) is another company that received DoW grant funding and that NNOMF accounts for grants as other income. NB also announced cash as of 12/31/25 of \$307.0M and a F2Q26 operating cash outflow of \$0.9M. We incorporate additional warrant proceeds into our forecasts and reduce our F2Q26 capital expenditure estimate to \$3.0M, from \$14.1M and vs. nil in the prior year period. We shift capital expenditures to later in FY26, which keeps our FY26 capital expenditure forecast of \$112.1M unchanged. NB announced on 12/22/25 that it expects to begin mine portal construction in the first quarter of CY26 for total anticipated portal costs of \$44.6M. Based on these changes, we reduce our F2Q26 cash burn forecast to \$3.9M, from \$27.5M vs. a burn of \$1.3M in the year-ago period.

Maintain operating expense forecasts. We maintain our FY26 operating expense forecast of \$35.9M, up 200% y/y, and FY27 of \$40.8M, up 13.8% y/y. NioCorp is pre-revenue, and we continue to forecast initial revenue in the first half of CY30.

Balance sheet review. NioCorp ended F1Q26 with \$162.8M in cash and no debt after a \$20.7M quarterly cash burn. NioCorp announced cash at the end of F2Q26 (Dec) of \$307.0M and we forecast no debt after a quarterly cash burn of \$3.9M. We

anticipate NioCorp next raises capital in the second half of CY26 after raising \$150M (gross) in capital in October by issuing equity at \$9.34 per share.

Reiterate Buy rating and \$15.00 price target. We derive our \$15 price target by employing a discounted cash flow analysis with an average discount rate of 14%. We reiterate our Buy rating based on our outlook for NioCorp to continue developing a critical mineral project in Nebraska and to ultimately generate revenue from selling various concentrates related to dysprosium, neodymium, niobium, scandium, terbium, and titanium. The U.S. currently does not produce niobium or scandium, and NioCorp's Elk Creek project in Nebraska is the most advanced niobium and scandium project in the country, based on our review.

Company description: *NioCorp is developing a critical mineral and integrated supply chain project in Nebraska called Elk Creek.*

I, **Tate Sullivan, CFA**, attest that the views expressed in this research report accurately reflect my personal views about the subject security and issuer. Furthermore, no part of my compensation was, is, or will be directly or indirectly related to the specific recommendation or views expressed in this research report.

The research analyst(s) primarily responsible for the preparation of this research report have received compensation based upon various factors, including the firm's total revenues, a portion of which is generated by investment banking activities.

Maxim Group makes a market in NioCorp Developments Ltd.

Maxim Group managed/co-managed/acted as placement agent for an offering of the securities for NioCorp Developments Ltd. in the past 12 months.

Maxim Group received compensation for investment banking services from NioCorp Developments Ltd. in the past 12 months.

Maxim Group expects to receive or intends to seek compensation for investment banking services from NioCorp Developments Ltd. in the next 3 months.

NB: We use the Russell 2000 Index (Bloomberg: RTY) as the relevant index.

Valuation Methods

NB: We use a DCF and net present value analysis to derive a 12-month price target.

Price Target and Investment Risks

NB: Aside from general market conditions and other economic risks, risks particular to our NioCorp Developments Ltd. price target and rating include: meaningful amount of funding required to develop critical minerals project in Nebraska; project development delays; delays in mining equipment deliveries; risk that production does not achieve targeted levels; higher development costs; higher project operating costs leading to additional capital needs; history of net losses; the company is pre-revenue and there are no assurances that the company will generate revenue; more China and U.S. commodity supply chain cooperation.

RISK RATINGS

Risk ratings take into account both fundamental criteria and price volatility.

Speculative – Fundamental Criteria: This is a risk rating assigned to early-stage companies with minimal to no revenues, lack of earnings, balance sheet concerns, and/or a short operating history. Accordingly, fundamental risk is expected to be significantly above the industry. **Price Volatility:** Because of the inherent fundamental criteria of the companies falling within this risk category, the price volatility is expected to be significant with the possibility that the investment could eventually be worthless. Speculative stocks may not be suitable for a significant class of individual investors.

High – Fundamental Criteria: This is a risk rating assigned to companies having below-average revenue and earnings visibility, negative cash flow, and low market cap or public float. Accordingly, fundamental risk is expected to be above the industry. **Price Volatility:** The price volatility of companies falling within this category is expected to be above the industry. High-risk stocks may not be suitable for a significant class of individual investors.

Medium – Fundamental Criteria: This is a risk rating assigned to companies that may have average revenue and earnings visibility, positive cash flow, and is fairly liquid. Accordingly, both price volatility and fundamental risk are expected to approximate the industry average.

Low – Fundamental Criteria: This is a risk rating assigned to companies that may have above-average revenue and earnings visibility, positive cash flow, and is fairly liquid. Accordingly, both price volatility and fundamental risk are expected to be below the industry.

DISCLAIMERS

Some companies that Maxim Group LLC follows are emerging growth companies whose securities typically involve a higher degree of risk and more volatility than the securities of more established companies. The securities discussed in Maxim Group LLC research reports may not be suitable for some investors. Investors must make their own determination as to the appropriateness of an investment in any securities referred to herein, based on their specific investment objectives, financial status and risk tolerance.

This communication is neither an offer to sell nor a solicitation of an offer to buy any securities mentioned herein. This publication is confidential for the information of the addressee only and may not be reproduced in whole or in part, copies circulated, or disclosed to another party, without the prior written consent of Maxim Group, LLC ("Maxim").

Information and opinions presented in this report have been obtained or derived from sources believed by Maxim to be reliable, but Maxim makes no representation as to their accuracy or completeness. The aforementioned sentence does not apply to the disclosures required by FINRA Rule 2241. Maxim accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to Maxim. This report is not to be relied upon in substitution for the exercise of independent judgment. Maxim may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and Maxim is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report.

Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by Maxim and are subject to change without notice. The price, value of and income from any of the securities mentioned in this report can fall as well as rise. The value of securities is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities. Investors in securities such as ADRs, the values of which are influenced by currency volatility, effectively assume this risk. Securities recommended, offered or sold by Maxim: (1) are not insured by the Federal Deposit Insurance Company; (2) are not deposits or other obligations of any insured depository institution; and (3) are subject to investment risks, including the possible loss of principal invested. Indeed, in the case of some investments, the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support these losses.
