Gen-3 Headset

Nexalin uses proprietary single-use electrodes to deliver an undetectable proprietary frequency-based waveform with lifetime recurring revenue.

Company Overview

Nexalin Technology is a pioneering medical device company advancing non-invasive neurostimulation to address the global mental health crisis. Powered by its proprietary Deep Intracranial Frequency Stimulation (DIFS™), Nexalin's Gen-2 device and Gen-3 HALO™ Clarity headset target deep brain structures linked to mental health and systemic conditions—without drugs or side effects. Peer-reviewed research has shown DIFS™ to produce clinically meaningful improvements across multiple domains, including reductions in blood pressure among patients with depression, as well as enhanced cognitive performance and brain connectivity in Alzheimer's disease, as published in *Radiology*. Nexalin's Virtual Clinic platform integrates AI-driven tools for at-home treatment and real-time monitoring, enhancing care accessibility and outcomes. With regulatory approvals in China, Brazil, and Oman, and CE Mark targeting underway, Nexalin is expanding globally. The company also serves as Industry Co-Chair of the National TBI Registry Coalition and is supporting UC San Diego's clinical trials on PTSD and TBI in veterans, underscoring its leadership in neurohealth innovation.

Investment Highlights

Proprietary technology with expanding clinical validation

- Peer-reviewed results published in *Radiology* demonstrated that Nexalin's 40-Hz DIFS™ stimulation significantly improved cognitive performance and enhanced brain network connectivity in patients with mild Alzheimer's disease; three peer-reviewed studies showing cognitive and brain network improvements in Alzheimer's and dementia
- Peer-reviewed study in *Journal of Affective Disorders* shows tech significantly reduces blood pressure in patients with depression—highlighting broader therapeutic potential
- Peer-reviewed clinical study in *Molecular Psychiatry* demonstrating DIFS™ improves attention and normalizes brain activity in patients with ADHD
- Independent clinical trials at UC San Diego evaluating HALO™ Clarity headset for PTSD and traumatic brain injury (TBI), including deployment of 50+ devices

Next-generation virtual care platform for at-home treatment

- Gen-3 HALO™ Clarity headset supports convenient, drug-free treatment from home through Nexalin's Virtual Clinic model, improving accessibility and scalability
- AI-powered Electronic Data Capture (EDC) and Patient Monitoring System (PMS) provide real-time data for optimized physician oversight and personalized care

Positioned to address major unmet medical and market needs

- Addressing large-scale mental health and neurological conditions including depression, insomnia, PTSD, TBI, Alzheimer's, and substance use disorders
- Newly allowed U.S. patent expands Nexalin's technology into treatment of opioid and other substance use disorders (OUD, SUD, AUD, stimulant addiction)
- Mental health market projected to reach \$537 billion by 2030; neuromodulation market forecasted at \$11 billion by 2028

Global regulatory progress and expansion strategy

- Gen-2 15mA device approved in China, Brazil, Israel, and Oman; Q-submission for Gen 2 accepted by FDA for Alzheimer's and dementia; Gen-3 HALO™ Clarity FDA clearance process underway
- CE Mark targeting planned for 2025 to enable European commercialization
- Strategic partnerships and research collaborations with leading institutions

Robust intellectual property portfolio

- IP secured through 2040 across multiple therapeutic categories and global markets

Experienced leadership and advisory board

- Led by CEO Mark White, an innovator in digital medical markets, supported by a highly experienced team and collaborations with leading institutions
- Military & Government Advisory Board includes General Wesley Clark (Ret.), former NATO Supreme Allied Commander Europe
- Advisory board and partnerships align with Nexalin's mission to redefine mental healthcare and scale solutions globally

Buy rating and \$4 price target from Maxim

Global Mental Health Epidemic

Insomnia

Almost 40 million Americans suffer from chronic insomnia (NCBI). 40% of people with insomnia are believed to also be affected by a mental health disorder.

***Nexalin Gen-1 devices obtained FDA clearance for Insomnia. In December 2019, FDA required new amended 510K applications for insomnia. Nexalin is presently analyzing prior FDA applications to determine new regulatory strategies for the treatment of Insomnia.*

Anxiety

Anxiety disorders are common, affecting about 18 percent of adults. But only about a third seek treatment. (Anxiety and Depression Assoc. of America).

***Nexalin Gen-1 devices obtained FDA clearance for Anxiety. In December 2019, FDA required new amended 510K applications for Anxiety. Nexalin is presently analyzing prior FDA applications to determine new regulatory strategies for the treatment of Anxiety.*

Dementia and Depression

An estimated 6.2 million Americans aged 65 and older are living with Alzheimer's Dementia in 2021 (alz.org). Experts estimate that up to 40 percent of people with Alzheimer's disease suffer from significant depression. (Alzheimer's Assoc.)

****Nexalin is in the planning process to submit applications for FDA clearance for the treatment of Depression and Mild Dementia Disorder.*

Addiction

Approximately 20 million Americans battled some form of substance abuse each year, prior to the additional challenge of Covid-19. (NSDUH)

**** Nexalin is in the planning process to submit applications for FDA clearance for the treatment of Addiction and Substance Use Disorder.*

Value Proposition

Nexalin Technology is redefining mental healthcare with its breakthrough, non-invasive neurostimulation technology, powered by proprietary Deep Intracranial Frequency Stimulation (DIFS™). The Gen-3 HALO™ Clarity headset delivers high-intensity, frequency-based stimulation to deep brain structures such as the hippocampus, amygdala, and brainstem—areas critical to treating mental health and systemic conditions. This non-pharmacological solution is designed to achieve therapeutic outcomes without side effects.

Recent peer-reviewed studies continue to validate DIFS™ potential, demonstrating clinically meaningful reductions in symptoms of depression and PTSD, significant decreases in blood pressure among patients with depression, enhanced cognitive performance and brain network connectivity in patients with mild Alzheimer's disease, and most recently, improved attention and normalizes brain activity in patients with ADHD. Together, these results highlight the expanding therapeutic relevance of Nexalin's technology across both mental health and neurodegenerative conditions.

The Company recently strengthened its intellectual property portfolio with the issuance of a new U.S. patent covering the design of the HALO™ Clarity system, supporting its innovative, home-based treatment model under physician supervision. Nexalin's Virtual Clinic platform enables patients to undergo therapy at home with clinician oversight, integrating AI-driven tools, including an Electronic Data Capture (EDC) system and Patient Monitoring System (PMS), to ensure real-time data collection, adherence tracking, and personalized treatment adjustments that improve outcomes and accessibility.

The company's commitment to research is underscored by 29 completed or active clinical trials and a growing number of independent studies, including UC San Diego's current clinical trial using HALO to treat PTSD and TBI in veterans. Nexalin has also taken a leadership role in public sector engagement, serving as Industry Co-Chair of the National TBI Registry Coalition and advising U.S. military and government agencies through its distinguished Military & Government Advisory Board.

Nexalin's expanding global footprint, with regulatory approvals in China, Brazil, Israel, and Oman, alongside pending CE Mark approval, supports its long-term strategy to become a leader in the \$537 billion mental health market. With robust IP protection, next-generation devices, and a scalable telemedicine model, Nexalin is well-positioned to drive a paradigm shift in how mental, neurological, and neurodegenerative disorders are treated worldwide.

Maxim updated coverage of Nexalin in August 2025, raising its price target to \$4 per share.
