Company Overview

OBOOK Holdings Inc., operating as OwlTing Group, is a blockchain technology company providing compliance-first settlement, payments, and digital asset rails for enterprises and individual users worldwide. Our mission is to build stablecoin infrastructure for the future. OwlTing operates across three sectors: payments, hospitality, and e-commerce, with OwlPay serving as the strategic growth engine. OwlPay provides a comprehensive infrastructure for both stablecoin and fiat transactions, covering on/off ramps, merchant checkout, digital asset management, API integration, and cross-border settlement.

Together, these businesses form the broader OwlTing ecosystem, with OwlPay at its core, strategically prioritized as the backbone of the stablecoin infrastructure powering the next generation of global money movement.

Investment Highlights

Scaled, Revenue-Generating Global Financial Infrastructure Platform

- A global financial infrastructure company builds the regulatory, settlement, and compliance rails required for the next generation of digital commerce
- Generated USD \$3.84M in revenue in 1H25, with accelerating growth driven by rising transaction volumes across its infrastructure network
- Gross Payment Volume exceeding USD \$110M in 1H25, representing 16.0% year-over-year growth and validating strong platform adoption

OwlPay: Enterprise-Grade Global Settlement & Payments Infrastructure

- OwlTing's core infrastructure layer, enabling enterprises to move value globally through fiat and regulated stablecoin settlement on a single integrated platform
- Full-stack infrastructure spanning settlement, compliance, risk, custody, and reporting with API-first architecture designed for enterprise-scale integration
- Multi-chain connectivity: Ethereum, Stellar, Solana, Polygon, Avalanche, Optimism and Arbitrum
- Payments now the largest and fastest-growing utilization layer of the company's infrastructure network

Regulatory and Compliance Moat

- Has spent years building a regulated financial infrastructure designed to meet bank-grade requirements
- Licensed in key jurisdictions including the United States, Japan, and EU, with regulatory applications in progress in Singapore, Hong Kong, and Latin America
- Enterprise-grade AML, KYC, custody, cybersecurity, and transaction monitoring architecture
- The regulatory foundation creates high barriers to entry and enables deep integration with financial institutions and global enterprises

Integrated Ecosystem with Built-In Demand

- Infrastructure embedded within operating businesses, creating natural and recurring transaction demand
- Hospitality SaaS platform serving 2,700+ providers globally with strong retention
- Native integration of booking, settlement, and payments funnels transaction volume directly into OwlPay
- E-commerce and hospitality operations function as continuous real-world stress tests and adoption engines for the infrastructure

Large & Expanding Market Opportunity

- Global commerce is undergoing a structural transformation as settlement moves from fragmented, high-latency banking rails to faster, lower-cost, programmable financial infrastructure
- Global payments revenue exceeded USD \$2.5T in 2024 and is projected to surpass USD \$3.0T by 2029¹
- Cross-border settlement and stablecoins represent the fastest-growing segments within global finance
- OwlTing is positioned at the core of this transition as foundational infrastructure for enterprise-scale settlement

Founder-Led Team with Deep Institutional Relationships

- Founded and led by Darren Wang, an early blockchain entrepreneur with deep industry, regulatory, and institutional relationships, building critical financial infrastructure for the next generation of global commerce
- Backed by strategic partners/investors including SBI Holdings and the Stellar Development Foundation

History

Value Proposition

OwlTing represents an opportunity to invest in a purpose-built, enterprise-grade payments infrastructure platform at an inflection point between foundational buildout and large-scale monetization. As global commerce increasingly demands faster, lower-cost, and more transparent cross-border settlement, traditional banking rails remain constrained by fragmentation, latency, and high fees. OwlTing addresses these structural inefficiencies through OwlPay, a full-stack global payments platform designed to support fiat and stablecoin transactions across jurisdictions, currencies, and blockchain networks, while meeting the operational and regulatory requirements of enterprise customers.

OwlTing's strategy is reinforced by a growing network of high-quality partners that validate both its technology and institutional readiness. The company's integration into the Circle Payments Network expands access to near-instant stablecoin settlement across key global corridors, while its OwlPay Cash collaboration with Visa underscores OwlTing's ability to work with established financial leaders to deliver compliant, real-world payment solutions. These partnerships position OwlTing to capture transaction flows across remittances, SME payments, and enterprise settlement as stablecoins and tokenized money continue to move into the financial mainstream.

With an improving revenue mix, and declining marginal transaction costs, OwlTing offers investors asymmetric upside tied to utilization-driven margin expansion rather than cyclical volume growth alone. Payment services revenue increased 16% year-over-year, Gross Payment Volume (GPV) reached US\$110 million, and active accounts exceeded 4,100 customers. As enterprise customers move from pilots to production and regulatory corridors continue to expand, the company is positioned to evolve from a transaction processor into a strategic global settlement platform. For investors seeking exposure to the modernization of global payments—where infrastructure precedes monetization—OwlTing presents a differentiated, de-risked, and increasingly institutional-grade opportunity at an early stage of its scaling curve.

Operating Leverage & Growth Outlook

Over the past five years, OwlTing has constructed regulatory, settlement, processing, and compliance systems capable of supporting multi-billion-dollar monthly transaction capacity. Current utilization represents only a fraction of built capacity, creating substantial operating leverage as transaction volumes scale.

2025 marked a pivotal transition year, with the core global payment infrastructure nearing completion to support enterprise-scale stablecoin payments. As enterprise customers transition from pilot programs to production deployment, revenue growth is expected to be driven primarily by utilization expansion rather than incremental infrastructure investment, enabling meaningful margin expansion over time. OwlTing is positioned to enter the business activation and monetization phase starting from 2026, as volumes grow and the mix shifts toward infrastructure-led settlement.
