

Social Content Reference Guide

Document Purpose

What this document is for

This is the reference guide for RedChip's social content AI agent. Every weekday morning, the agent pulls fresh press releases from RedChip client companies and turns them into platform-ready social posts. This document is what the agent reads before it does anything — it sets the standard for quality, tone, and what good output looks like on each platform.

How the agent should use it

The people seeing these posts are small-cap investors, analysts, fund managers, and both retail and institutional investors. They're financially literate, they move fast, and they don't have time for fluff. Before writing anything, the agent should check the tone section and use the platform examples as the benchmark. If it doesn't look like the examples, it's not done yet.

Tone of Voice

Brand Description

RedChip writes for investors, not the general public. Our audience knows what a balance sheet is, understands what a regulatory milestone means, and can spot hype from a mile away. We take press releases from small-cap companies and turn them into content that respects that intelligence — clear, specific, and grounded in the numbers. We're not cheerleaders. We're translators. Our job is to take what a company announced and tell an investor why it matters, what to watch next, and what the real signal is beneath the headline.

Guiding Principles

1. **Lead with the ticker and the news.** Every post opens with the company name and ticker symbol. Investors need to know immediately who this is about and what happened.
2. **Translate, don't transcribe.** A press release is raw material. Restate the news in plain language, then explain what it means for the company's trajectory — revenue potential, market position, regulatory pathway, execution progress.
3. **Make the numbers do the work.** Specific figures build credibility. \$2.8B project value, 20,736 GPUs, 80 MW of capacity — concrete numbers anchor the story and give investors something to evaluate.

4. **Structure for scanners.** Investor audiences skim. Use "Why Investors Should Be Watching" or "Key Investor Takeaways" sections with bullet points to surface the most important details fast.
5. **Confident, not promotional.** We don't hype, we don't use exclamation points to manufacture excitement, and we never oversell. The news speaks for itself — our job is to frame it clearly.
6. **Match the platform.** X gets the punchy analytical take — tight paragraphs, a clear so-what. LinkedIn, Instagram, and Facebook get a fuller breakdown with emojis used as section markers (not decoration), bullet points, and a link to the full release.

What to avoid: Vague language ("exciting opportunity," "game-changing"), reproducing press release boilerplate verbatim, missing the ticker symbol, burying the key number, and anything that reads like an ad rather than informed IR commentary.

Platform Examples

Graphic Format

Example 1

Title: Gorilla Technology Secures Thailand Site for 200MW AI Data Center Campus

Sub-title: Flagship regional compute platforms target ~\$1.5B annualized revenue potential

Example 2

Title: Off the Hook to Report Q1 FY2026 Results May 14

Sub-title: OTH is building an AI-Powered Marine marketplace spanning boat sales, financing, auctions, and servicers across the \$57B U.S. boating marketplace

Example 3

Title: OwlTing Launches AI Agent Wallet for the \$3T-\$5T Agentic Commerce Economy

Sub-title: Launch of OwlPay Agent Wallet extends OWLS' stablecoin infrastructure into agentic commerce, combining self-custody wallets, Visa Direct integration, and 40-state U.S. licensing coverage.

Example 4

Title: First Phosphate Strengthens Capital Structure With \$3.07M Warrant Exercise

Sub-title: The company remains debt-free as it continues to advance its North American LFP battery supply champion strategy in Quebec.

Example 5

Title: Trinity Biotech Strengthens North American Growth Strategy as Margin Expansion Accelerates

Sub-title: New commercial leadership joins as transformation efforts begin translating into improving margins stronger EBITDA, and 2026 operating momentum.

Example 1

The Metals Company \$TMC: NOAA Compliance Milestone Sharpens Path Toward First-of-its-Kind U.S. Deep-Seabed Mining Permit

TMC USA @TheMetalsCo has reached a major regulatory milestone, with NOAA determining its consolidated deep-seabed mining application is in full compliance under the Deep Seabed Hard Mineral Resources Act.

This is not just a procedural update. It moves \$TMC into the next stage of review for a potential exploration license and commercial recovery permit covering roughly 65,000 km² in the Clarion Clipperton Zone, with an estimated 619M tonnes of wet polymetallic nodules and additional exploration upside of 200M tonnes.

For resource investors, the key takeaway is clear: \$TMC is advancing through a defined U.S. regulatory pathway toward potential commercial recovery of critical metals essential to energy, defense, manufacturing, and infrastructure.

With NOAA review now moving toward certification, Federal Register publication, environmental review, and public comment, the company continues to point to a potential permit decision before the end of Q1 2027.

Example 2

Gorilla Technology \$GRRR: ~\$2.8B India AI Infrastructure Expansion Puts the Company in the Center of a Major AI Compute Buildout

@GorillaTechGrp is expanding its collaboration with Yotta Data Services to support the deployment of an additional 20,736 B300 GPU cards in India, with completion expected by September 30, 2026.

Based on the current commercial framework, this incremental deployment represents ~\$2.8B in project value.

This is on top of the previously announced Yotta framework of roughly 640 high-performance servers and 5,000+ GPUs for AI workloads.

Why Investors Should Be Watching:

- Major AI Infrastructure Exposure: India is emerging as one of the most strategically important AI compute markets globally, driven by sovereign, enterprise, and hyperscale demand.
- NVIDIA-Linked Demand Signal: The 20,736 GPU deployment includes a major NVIDIA engagement, with NVIDIA expected to account for roughly half of the offtake through a 4-year commitment tied to one of APAC's largest NVIDIA DGX Cloud clusters in India.
- Commercial Scale: A ~\$2.8B project value materially expands \$GRRR's role in India's AI infrastructure ecosystem.
- Execution Momentum: Deliveries for the first Yotta project remain on track through the end of July, supporting confidence in the broader rollout.

India is quickly becoming one of the world's most important AI infrastructure markets, and \$GRRR is positioning itself at the center of that growth.

Example 3

Calidi Biotherapeutics \$CLDI: AI Partnership Supports Key Regulatory Milestone for CLD-401

@CalidiBio is partnering with TransferAI to help streamline the IND submission process for CLD-401, the lead candidate from its RedTail systemic virotherapy platform. CLD-401 is engineered to express IL-15 superagonist, designed to activate key immune cells involved in anti-tumor response, including CD8 T-cells, gamma delta T-cells, and NK cells.

The goal is clear: support a more efficient, traceable, and organized regulatory workflow as \$CLDI works toward its planned IND filing by year end.

For investors, the focus is the combination of a near-term regulatory milestone, an oncology program targeting high unmet-need cancers, and a broader RedTail platform designed to deliver therapeutic genetic payloads directly within tumors.

Example 4

Bimergergen Energy \$BESS: \$2B Battery Storage Strategy Takes Center Stage

@BimergergenEnergy will present at the Market Movers Investor Summit on May 5, giving investors a closer look at its \$2B growth strategy built around a 2.0 GW battery energy storage project pipeline across major U.S. power markets, including ERCOT, PJM, WECC, CAISO, and MISO.

\$BESS is pursuing a project-specific financing strategy designed to limit public company dilution and avoid debt recourse. The model targets energy arbitrage, storing power when prices are

lower and selling when grid demand and prices rise, with long-term offtake agreements intended to support contract-backed revenue streams.

Example 5

Enlivex \$ENLV: RAIN Token Secures Major Exchange Listing on HTX

@Enlivex announced that RAIN, the primary asset in its digital treasury strategy, is now listed on HTX, one of the world's largest global cryptocurrency exchanges.

Key Investor Takeaways:

- Expanded Market Access: HTX serves users across 160+ countries, increasing global accessibility for RAIN.
- Liquidity Milestone: HTX reported approximately \$3.3T in 2025 cumulative trading volume across 700+ assets.
- Treasury Exposure: Enlivex recently reported approximately 78.8B RAIN tokens held, valued at \$567M as of April 27, 2026.

For \$ENLV investors, the HTX listing strengthens secondary liquidity and visibility for RAIN, supporting Enlivex's dual strategy across longevity therapeutics and the emerging prediction markets ecosystem.

Example 1

 ASP Isotopes (Nasdaq: ASPI): Quantum Leap Energy (QLE) Strengthens Nuclear Fuel Strategy with Key Advisory Appointment

Quantum Leap Energy (QLE), a wholly owned subsidiary of ASP Isotopes, has appointed Dr. Peter S. Fiske to its Strategic Advisory Board, adding deep experience in technology commercialization, advanced materials, and government partnerships.

 Dr. Fiske brings credibility where it matters most for energy investors: government commercialization, advanced materials, defense-sector relationships, and institutional funding pathways. He previously led the U.S. Department of Energy (DOE)'s \$110M Energy-Water Innovation Hub at Lawrence Berkeley National Laboratory, and his appointment adds another layer of execution experience as Quantum Leap Energy advances nuclear fuel technologies tied to uranium enrichment, lithium isotope separation, and radioactive waste treatment.

For ASPI, this is more than an advisory board addition. It signals continued strategic buildout at QLE following its CTO appointment, SAB formation, and University of Bristol collaboration for a lithium laser research facility in the UK.

Example 2

 Lantern Pharma Inc. (Nasdaq: LTRN): withZeta.ai Roadmap Strengthens Commercial AI Oncology Platform

Lantern Pharma just unveiled the next phase of its roadmap for withZeta.ai its superintelligent multi-agent AI co-scientist platform designed for oncology research and drug discovery.

The update is notable for investors because withZeta.ai is now commercially available through a subscription payment model, creating a potential revenue stream to support Lantern's clinical-stage precision oncology pipeline.

 Key roadmap additions include:

- ZetaSwarm™: A planned multi-agent intelligence layer designed to coordinate specialist AI agents across oncology, biomarkers, clinical trial strategy, medicinal chemistry, and scientific reasoning
- ZetaOmics™: A planned computational biology toolkit built for real-time multi-omic analysis, including biomarker, pathway, survival, and drug-response analytics
- Enterprise Deployment: Planned institutional features including organization-level accounts, role-based access, private knowledge bases, and audit trails for pharma, biotech, academic medical centers, and cancer centers

For investors, the key takeaway is the potential for Lantern Pharma to pair its oncology pipeline with a scalable AI software platform aimed at research institutions and drug development organizations.

Example 3

 Blue Gold Limited (Nasdaq: BGL): \$1B+ Ghana Arbitration Takes a Major Step Forward

Not every gold stock catalyst comes from the drill bit. Blue Gold Limited just announced a key procedural win in its \$1B+ arbitration against the Republic of Ghana, after the tribunal rejected Ghana's request to split the case into three separate stages.

That matters because the case now stays on a single consolidated track, potentially avoiding added delay, cost, and procedural drag.

Why Special Situation Investors Are Paying Attention:

- \$1B+ Arbitration Exposure: A potential high-impact value catalyst for a small-cap gold company.
- Ghana's Delay Strategy Rejected: The tribunal was "not persuaded" that splitting the case was appropriate at this stage.
- Merits Phase Now in Focus: Blue Gold is preparing its Memorial on the Merits, the next major substantive filing.
- Cleaner Path to Resolution: Management says the decision allows the Treaty claims to move forward more quickly and efficiently.

For gold investors hunting asymmetric setups, Blue Gold now has a legal catalyst sitting alongside its mining strategy.

Example 4

Bimergen Energy (NYSE American: BESS): 80 MW ERCOT Storage Portfolio Moves Closer to Revenue-Generating Deployment

Bimergen just locked in SMA America as inverter supplier for eight 9.9 MW battery storage projects in ERCOT, totaling ~80 MW of capacity in one of the most important power markets in the U.S.

The investor takeaway: this milestone helps move Bimergen's portfolio from acquisition toward construction, commissioning, and eventual grid participation.

Why investors should be paying attention:

- Execution milestone: Inverter selection is a key step in advancing BESS projects toward deployment.
- ERCOT exposure: Texas continues to need flexible storage capacity to support grid reliability, peak demand, and renewable integration.
- Incentive alignment: SMA selection supports FEOC compliance under the Inflation Reduction Act, helping preserve eligibility for applicable tax incentives.

- Shareholder-friendly financing: Bimerger-funded acquisitions and long-lead equipment through strategic capital partnerships and non-dilutive project-level financing.
- Visible timeline: Projects are expected to enter service between Q4 2026 and Q1 2027.

For energy investors, the signal is execution: Bimerger is advancing an 80 MW ERCOT portfolio with key equipment secured, non-dilutive financing in place, and service dates targeted for Q4 2026 to Q1 2027.

Example 5

 Gorilla Technology Group (Nasdaq: GRRR): 200MW Thailand AI Campus Targets Southeast Asia's AI Compute Boom

Gorilla Technology Group just secured a strategic land site in Korat, Thailand for a planned 200MW AI data centre campus designed to support sovereign AI compute demand across Southeast Asia.

 Why investors are paying attention:

- 200MW planned facility load
- 150MW targeted IT load
- 6 high-density AI data halls
- First phase targeted for completion in Q1 2027
- Approx. 76,000 GPUs supported under an illustrative full-deployment configuration
- Targeting ~\$1.5B in annualized revenue starting 2028, subject to customer contracting, deployment ramp-up and full commercial utilization

 The AI race is no longer just about models and software. It is increasingly about land, power, cooling, security, and execution.

Gorilla's planned Thailand campus positions the company directly in the AI compute infrastructure stack, serving potential demand from governments, hyperscalers, enterprises, AI developers and strategic offtakers seeking secure regional capacity.

With phased development, identified power, dark fiber and water infrastructure, plus a non-dilutive capital strategy centered on project-level and infrastructure financing, this could become one of Gorilla's most important growth platforms.
